Early Varieties

***Alpha or Earliest of Any.** The earliest sweet corn. Matures a week to ten days ahead of Mammoth White Cory.

For many years we have been seeking a variety of sweet corn that would be earlier than Mammoth White Cory and still produce ears of fair size and good quality. Of the many varieties and strains which have come under our observation Alpha stands out pre-eminently in meeting these requirements.

The ears average six to seven inches long, are uniformly eight rowed, fully equal in quality to Mammoth White Cory with skin a trifle more tender. The stalks are very uniform in height averaging about four feet. Ears are set low and close to the stalks. Pkt. 15c., $\frac{1}{2}$ pt. 25c., pt. 60c., qt. \$1.00.

Aristocrat. This delicious Sweet Corn is a reliable extra early sort, ripening with Cory; grows 4 to 6 feet high, and ears are of large size, measuring 8 inches in length, and extremely sweet. Pkt. 15c., $\frac{1}{2}$ pt. 25c., pt. 40c. qt. 75c.

Howling Mob. Is ready for use five days later than the extra-early Cory when both are planted at the same time, but the ears are much larger in size, grains much whiter and sweeter. An early variety of large size. Pkt. 15c., $\frac{1}{2}$ pt. 20c., pt. 30c., qt. 60c.

Early Minnesota. An old-time favorite. Eight to ten rowed; large, white grains and very productive. Pkt. 10c., $\frac{1}{2}$ pt. 15c., pt. 25c., qt. 50c.

Stowell's Evergreen. Standard main crop. Very strong grower; produces ears 8 inches long, with 14 or more rows of very sweet, sugary grains. Being well known it does not need more recommendations. Pkt. 10c., $\frac{1}{2}$ pt. 15c., pt. 30c., qt. 60c.

***Wilks Narrow Grained Evergreen.** About a week earlier in maturing than Stowell's, not quite as large an ear but of better quality. Pkt. 10c., $\frac{1}{2}$ pt. 20c., pt. 35c., qt. 65c.

Cassaba or Winter Musk Melon. The Cassaba has come to stay. To some extent the Cassaba flavor is an acquired taste, but judging from the increasing popularity of the two varieties we list, an immense population is acquiring the taste. One now sees these Cassabas in all the Eastern markets, and they are on the bills of fare of all the finest restaurants. They are plentiful as late as February, when all other fruits are rare. Culture is the same as for muskmelon.

Golden Beauty. This one we recommend as the best. It begins to ripen in July and continues bearing and ripening all summer and fall, or until frost comes. The later fruits can be stored in a cool house or cellar and will ripen slowly, so that they can be marketed from time to time until late in January or early February. Golden Beauty is bright yellow, about globular, with wrinkled skin, slightly

pointed at the stem end. As we said in our description last year, it resembles a plum pudding in a yellow bag, cut off at the top. The fruits are about six to eight inches in diameter. The flesh is pure white and very thick. Pkt. 15c., oz. 35c.

Winter Pineapple. This is the best of the later ripening winter varieties. As it ripens late on the vines, it can be kept for a longer period in the cellar. The fruits are very solid and heavy, about 10 to 12 inches in diameter, thick at the base and tapering at the top. The color is deep sea green, with mottled white and green at the bottom. TOMATO

One ounce will produce 1000 plants.

Sow in a hotbed about the first week in March, in drills 5 inches apart, and $\frac{1}{4}$ inch deep. Transplant to the open ground when all danger of frost is past, setting the plants 3 to 4 feet apart each way. Sufficient plants for a small garden may be started by sowing a few seeds in a shallow box or flower pot, and placing it in a sunny window of the room or kitchen. By training the vines on trellises or tying to stakes the fruit will ripen better.

Early Varieties

***Avon Early.** This new extra early, scarlet fruited variety, which I offer for the first time, is the result of several years of careful breeding. We consider it the most desirable variety of its class.

The fruits are large for so early a variety, round or slightly flattened, of deep scarlet color, smooth, free from cracks and of good quality. It produces ripe fruit as early as the best strains of Earliana and will outyield that variety in both the first and subsequent pickings. The fruits are of more desirable shape, more free from cracks and show less green about stem than any other extra early variety. Pkt. 25c., oz. \$1.50, 2 ozs. \$2.75, $\frac{1}{4}$ lb. \$5.00.

John Baer (new). This is a fine, smooth tomato of medium size, bright scarlet in color, almost globular in shape, slightly flattened at the stem and blossom ends. The fruit is very solid and the seed cavities medium small. It has proved to be a very prolific tomato and quite early. In earliness it is noticeably ahead of the early varieties, Bonny Best and Chalk's Early Jewel and is somewhat similar to them in general characteristics. For abundance of crop it proved to be one of the most prolific. Whoever has tried John Baer says, it has given excellent satisfaction and it is grown on a very large scale in all parts of the country. It is a grand all around tomato and is recommended highly. Pkt. 10c., oz. 40c., 2 oz. 75c., $\frac{1}{4}$ lb. \$1.25.

***Earliana.** Very popular early variety. Bright red, smooth, solid and meaty. Pkt. 10c., oz. 30c., 2 ozs. 55c., $\frac{1}{4}$ lb. \$1.00.

June Pink. Extra early pink. In habit resembles Earliana. Very prolific. Pkt. 10c., oz. 30c., 2 ozs. 55c., $\frac{1}{4}$ lb. \$1.00.

***Early Dwarf Champion, or Tree Tomato.** A favorite on account of its dwarf habit. Needs no supports. A fine variety for the home garden. Color a glossy purple; very prolific; smooth and of good size. Pkt. 10c., oz. 30c., $\frac{1}{4}$ lb. \$1.00.

**Aster. Pink Enchantress****ASTERS**

The most popular of all Summer and Autumn flowering plants. I have taken special care to procure the best stock, true to name and color, without regard to cost. Sow seeds in hotbed or cold-frame early in April, or in the open ground in May. Transplant in well-prepared, rich soil.

Pkt.

VICK'S CERISE ROCHESTER. A new color this season. A beautiful, soft, glowing shade which flower lovers greatly admire. It is a perfect type with great, shaggy flowers borne on long stems. Its charming color and handsome form make it unexcelled either for outdoor showing or for cut flower displays50
---	-----

VICK'S SNOWDRIFT. The earliest white aster in existence. Vick's Snowdrift is without doubt the earliest of all extra early varieties. The plants grow erect with slender wiry stems, crowned with beautiful feathery flowers nearly a week ahead of any other variety we have ever seen. The long recurved petals give the flowers an exceedingly graceful effect, heightened, in many cases by the ragged irregular character of the inner petals.....	.35
---	-----

VICK'S EARLIEST PINK. Just what we have been trying to get for years to go with Snowdrift to which it is similar except in color. One of the best new things we offer this year.....	.35
--	-----

VICK'S EARLIEST PURPLE. A beautiful early purple, very double and long-stemmed35

VICK'S EARLIEST LAVENDER. Identical with Vick's Snowdrift except in color, which is the same desirable shade as Vick's Lavender Gem35
---	-----

- VICK'S AUTUMN GLORY.** Semple's type. Pkt.
Pure sea-shell pink. Blooms after all
other late Asters are past their prime
and before the early Chrysanthemums
are ready25
- VICK'S GIANT PURITY.** Larger and bet-
ter in every way than any White Aster
ever introduced25
- VICK'S GIANT DAYBREAK.** Like the
Giant Purity, in size..... .25
- VICK'S WHITE PERFECTION.** Consid-
ered the finest mid-season white. The
flowers are exquisite in form, meas-
uring 4 inches in diameter..... .25
- VICK'S PEERLESS YELLOW.** Without
doubt the most satisfactory yellow yet
produced. Its delicate hue of pure
sulphur yellow, endears it at once to
every true lover of beauty. The flow-
ers are large and remarkably full and
ball shaped, with centers deeply cover-
ed with curled and twisted florets.
The plants are of branching type and
very vigorous. It is not unusual to
find a plant with from twenty to
thirty good flowering stems sufficient-
ly long and with flowers of ample size
for extra fancy cut flower purposes.
In a bed the plants will easily fill two
foot rows. In a border a single row
is ample. It is certainly a winner in
its class and color..... .35
- HEART OF FRANCE.** The best pure red
Aster ever introduced. All others
have somber shades of blue or too
much yellow in the color pigments.
Heart of France opens red as the
purest ruby, deepens with age and re-
tains its remarkable beauty to the
very end. The petals appear strik-
ingly changeable, showing now a glow
and sheen quite unique, now a soft
warm velvety texture. In any light,
natural or artificial, Heart of France
is startlingly beautiful and will com-
mand instant admiration. Because of
all these splendid qualities they have
named it in honor of brave, brilliant,
steadfast France35
- VICK'S SILVERY ROSE.** Here is another
robust, long-stemmed, large-flower-
ing new variety. Every petal is a
combination of deep lilac rose, almost
cerise, very delicately threaded with
white. Do not get the impression that
this is a striped variety. The threads
are so tiny as to give the petals a sil-
very sheen. Even the slightest change
in light will shade the petals from a
rich glowing rosy cerise to a silvery
rose35
- VICK'S ROYAL.** An excellent strain de-
veloped from Vick's Branching. With-
out doubt one of the best, by many
considered the very best, general pur-
pose, early aster ever introduced.
White ½ oz. 60c. .15
Pink ½ oz. 60c. .15
Lavender ½ oz. 60c. .15
Purple ½ oz. 60c. .15
- VICK'S PINK ENCHANTRESS.** Vick's Pkt.
Pink Enchantress is upright in habit,
as distinguished from the branching
form. The plants are very vigorous,
making a much stronger growth than
any of the older upright varieties.
The stems are long, strong and grace-
ful. The flower itself, always full
double, is a soft delicate pink so
popular in the Pink Enchantress Car-
nation, unusually lasting, and not
withstanding its delicate shade, the
color does not fade. In season be-
tween midseason and late varieties.. .25

SWEET PEAS

Sweet Peas should be sown as early in Spring as the ground can be prepared. Manure well, making the drills about five inches deep. Sow plentifully, covering about two inches deep, and by degrees, as the vines grow up, fill the trenches with soil, care being taken not to draw the soil on the top of the growing vines. The following list embraces all the most desirable new and distinct large-flowering varieties of recent introduction, which cannot fail to give satisfaction. One ounce will sow about 8 feet of row, ¼ pound for 35 feet.

The following collection has been selected from the newest and best varieties of recent introduction and should be included in every garden. They will be found invaluable for bedding, cutting or exhibition.

The Gladiolus Novelty of 1920,		
"White America." A seedling of		
"America," and the most important		
new variety since the introduction		
of that famous variety in 1906. "White America"		
has the same strong habit of growth,		
form of flower and substance and is the		
whitest variety known. Color—Bud flesh-white,		
opening clear white with slight marks		
of blue in throat.....	2.00	10.00

STANDARD NAMED GLADIOLI

Mrs. Francis King. A strong grower,		
vigorous and healthy. Has long, strong		
foliage and effective flower-spikes. The		
magnificent flowers measure 4½ inches		
across, and there are five or six flowers		
well spread out on the spike at the same		
time. The color, brilliant flamingo-pink,		
blazed with vermilion-red, is most effective		
both in daylight and under artificial light.....	.75	4.00

America. By far the most vigorous and easily grown Gladiolus known. The flowers, which are of immense size, are of the most exquisite, soft pink, and very light. The color is the same as seen in the most exquisite Cattleya orchids. For cut use and bedding it is without a rival	Doz.	100
	.75	4.00
Panama. Beautiful, deep rose self; large, well-expanded flowers and fine spike. Has the same form and habit as America, and is considered the best rose-colored Gladiolus	1.00	7.00
Fire King. Long, graceful spikes, showing half a dozen immense blooms open at the same time. Color, intense fire-scarlet. More brilliant than <i>Brenchleyensis</i> , <i>Cardinal</i> , <i>Mrs. Francis King</i> or any other variety. Is perfectly grand; will become the leading cut-flower variety of its color..	1.00	6.00

	Doz.	100.

L'Immaculee. Pure White, medium size flowers	1.50	10.00
Willy Wigman. Blush white, dark blotch, fine form.....	1.00	6.00
Halley. The predominating color of these flowers is delicate salmon pink with a slight roseate tinge, though the lower petals bear a creamy blotch with a stripe of bright red through the center, the whole producing a delightful effect75	5.00
Wild Rose. A remarkable variety and one that will gain in prestige as it becomes known for it ranks with the very best. Color very bright rose or blush tint, exceedingly delicate and pretty, and needs only to be seen to be appreciated. In its particular color it stands alone. Exceedingly fine for forcing under glass	1.00	6.50
Baron Hulot. A blue Gladiolus—the only one there is. Nature, so prodigal of her reds and yellows, is a true indigo blue Gladiolus. The spikes are decidedly in the minority and because of this fact, are, perhaps, appreciated the more. This is a true indigo Gladiolus. The spikes are long, the blooms large and showy	2.00	12.50
Nora. Pale lavender blue with little darker spot on lower petals. Is very beautiful, when planted with a good yellow variety.....	1.00	6.00

Rax Rat Killer

While it is absolutely deadly to rats and mice, it is harmless to human beings, domestic animals, poultry and birds. It may be used anywhere with complete safety.

Rats Leave Before They Die

Within a few days after eating bait prepared with Rax, rats and mice become feverish and seek the open air where they die—outdoors.

How to Use Rax

Add water to the bottle and shake contents until water is cloudy. Then moisten bait (bread, crackers or cheese) with the mixture and place it near the holes. Rax does not affect the taste of the bait.

Directions are furnished with each package. One bottle is enough for an ordinary house; allow one bottle to each 500 feet of floor space in large barns, mills, etc. Price, 75 cts. per bottle.

SPRAYERS AND SPRAY PUMPS

Pomona. In small orchards a good barrel sprayer will usually be found the most suitable; in fact, many large fruit growers use several of these pumps instead of a large power outfit.

For years we have given special attention to the production of efficient barrel sprayers, and the "Pomona" is the leader in this line. Every feature that our long experience has proved desirable in a barrel sprayer has been included in the "Pomona," and, without hesitation, we offer it as absolutely the best barrel sprayer on the market, one in which every detail is as good as it can be made. For the customer who believes in getting the best when he buys, who wants a sprayer that will give the best results, and give the same reliable service year after year, we strongly recommend the "Pomona."

The plunger, plunger connection, gland, valves, valve seats and strainer are of solid bronze. All working parts are simple, and so located that they can be easily removed and cleaned. The air chamber is of steel and has a large capacity, making it easy to maintain the pressure and giving smooth operation. The lever can be adjusted for a 3-, 4- or 5-inch stroke, the adjustment being obtained by removing and replacing a single bolt.

The agitator is very simple but effective, and is operated by the pump lever. Complete. Barrel and Pump, with 15 ft. $\frac{3}{8}$ discharge hose, nozzle and 10 ft. bamboo extension rod \$42.50.

Bamboo Extension Rod. With stop cock 8 feet long. Each \$6.00.

HIGH GRADE FERTILIZER

Analysis will be furnished on application.

The first four kinds offered below are the celebrated Bowker's fertilizers and are of the highest grades obtainable.

The Bowker's Specials differ from other fertilizers because they actually aim to supply the required element in proper form and quantity to meet the wants of different crops or classes of crops, as shown by analysis, and their different habits and conditions of growth. They are complete fertilizers in that they furnish all the elements necessary to furnish for the production of crops. They are high-grade fertilizers and consequently must be made of high-grade materials. Low-grade raw stock cannot be used in high-grade fertilizers. The absence of fillers makes them exceedingly rich and concentrated, therefore the most economical to purchase, because freight and other handling charges are not incurred on a quantity of worthless bulk.

Prices on all fertilizers subject to change without notice.

Springfield Carnation Food. Springfield Carnation Food is a compound in which the elements of fertility are so blended that a portion of the plant foods are presented to the roots in soluble form, ready for immediate assimilation, others are less quickly available. The various organic constituents becoming gradually available as the soil bacteria convert them to an available condition.

This carnation food is not a chemical stimulant, but rather an evenly balanced ideal organic diet. It invigorates the root action, and produces a natural growth, not a soft fleshy one; hence the stem and calyx are strengthened in all seasons, the lasting quality of the flowers lengthened and the color intensified.

It is essentially a food of health, vitality and productiveness. 100 lbs. \$6.50.

A SEED AND SOIL INOCULANT
That Increases Crop Production and
Greatly Improves the Soil

Soil and crop experts agree that for best growth, and to put atmospheric nitrogen in the soil, it will pay all gardeners to inoculate their beans and peas, even where they are at present successfully grown. Peas and beans grow their seeds in a pod. Their roots are the home of bacteria that draw fertility-building nitrogen from the air and store it in swellings on the roots, called nodules. These nodules not only feed nitrogen to the crop they are on, but rot away in the ground and supply valuable nitrogen to the soil.

No. 33 Single-Wheel Hoe, Cultivator and Plow. A cheap and efficient garden tool, consisting of one plow, one 10-in. sweep, one 5-in. sweep, one 2-in. cultivator, and one 4-in. cultivator. \$6.00.

No. 12

No. 12 Combined Double and Single-Wheel Hoe, Cultivator, and Plow. This tool is identical with No. 11 Double-Wheel Hoe, except that it has one pair of plows, one pair of hoes, four cultivator teeth, and a pair of leaf-lifters only, and is sold at a correspondingly less price. \$11.50.

No. 11 Planet Jr. is the best combined double and single wheel hoe made, and has the largest and most useful set of attachments. The steel frame can be set at different heights to suit any kind or depth of work, and the attachments or their position can be changed in a few seconds.

The arch is high enough to straddle a row until plants are 20 inches high, and this insures close work and death to weeds. Has steel frames and 14-inch steel wheels. The greatest hand-cultivating tool in the world.

Equipment:

One pair 6-inch hoes.

One pair 4 1/2-inch hoes.

Four steel cultivator teeth.

One pair plows.

Two 3-tooth rakes.

Two 5-tooth rakes.

Two leaf lifters.

All oil
tempered.

Price, \$14.75.

Fire-Fly Garden Plow. This tool is exceedingly useful to owners of small gardens. It will throw a furrow four to six inches wide and one to three inches deep, and deeper by going a second time in each furrow. In this way celery can be nicely banked in the home garden. It opens fine furrows for manure or seeds and covers them, and opens up rows for all kinds of plant setting. In cultivating, plow away, weed the row and plow back again; nothing more thorough than this. After the furrow is thrown away from the crop lightly, leave it a few days before throwing back. This tool will enable a busy man to do in his spare minutes nearly all the work of a family garden. Chicken raisers find it of great advantage in plowing up their scratching yards. \$4.00.

GREENHOUSE ROSES and CARNATIONS

A. N. Pierson's Cromwell Stock
As listed in their catalogue, and
their 1923 prices.

We offer to you for 1923 these new Roses, which are not only new, but, we believe, better. They are not only distinct from each other, but are also distinct from any other varieties now in commerce. To the Montgomery Company, who raised Mrs. Charles Russell and Hadley, must go the credit for Crusader and Pilgrim.

Evelyn. In Evelyn we have a greatly improved Ophelia, particularly for garden culture. The growth is more robust; the flower is more double, having fully fifty petals of excellent texture and, therefore, better keeping quality on the plant or when cut. In color it is a more pronounced salmon toning to a soft pink toward the center of the flower.

Crusader. (Montgomery.) A big, strong-growing variety, robust and rugged in every characteristic. The growth is heavy and the flower stems are strong and heavy, producing very little blind wood. It is free growing and free flowering, and the blooms are truly characteristic of the variety—big and double, and, in color, a rich, velvety crimson. These large, heavily petaled blooms open perfectly and are amply supported by the strong-necked, heavy flower growths. Crusader takes water well and will keep under almost any conditions. The plant is free from canker and does not

show any tendency to die at the union of scion and stock. It breaks freely from the hard wood and is a strong-growing, free-flowering red Rose.

Pilgrim. (Montgomery.) In color, a beautiful shade of bright rose-pink. The bud, which opens perfectly, is long and of ideal form. Pilgrim is a Rose of good substance and petalage, and at any stage of development is perfect in color and form of flower. Its pronounced tea fragrance will attract all rose lovers. It is prolific and highly productive of first quality blooms. The stems are straight and strong, and there is no tendency to weaken at the neck. It takes water freely, and this quality makes it a good Rose for the store man, as it will keep when cut and retain its color and fragrance. It is a wonderful grower, propagates easily, grafts nicely, grows freely, and throws strong bottom canes early, making heavy, profitable plants on the bench in a very short time. It makes little blind wood and is comparatively free from disease, resisting black-spot and mildew to a great extent. It is the pink Rose to grow.

Columbia. A great favorite and very popular Rose. One of the best in this color in cultivation. Seedling of Ophelia, very strong in growth with long straight stems and pleasing shade of rose pink color. A very fine variety.

Premier. Seedling of Ophelia and Russell. The flowers are of Russell type. Color, is a clear pure shade of rose pink throughout the blooming season. Very free and easy grower. Stiff stems and almost thornless.

Milady. The habit of growth is strong and sturdy, and the foliage is excellent. The flower is large and double and opens perfectly at all seasons of the year. In color it is similar to Richmond, although richer in color in the bud.

Ophelia. This variety stands today as the best light pink rose ever offered. It is salmon-flesh-pink in color, shading to yellow at the base of the petal in the partially opened flower, and is very attractive; but the real charm lies in the open flower which is, to the rose-lover, perfection in form and color. It is of easy habits, grows well and produces well.

Radiance. Cerise-pink in color and of easy culture. It is a clean grower, producing good flowers and an abundance of heavy wood. Aside from being a greenhouse favorite, it has the distinction of being the best pink bedding rose in existence.

Red Radiance. There has been a demand among the rose-growers of America for a red rose that is easy to handle, and one that is free from the failings of other well-known red roses. Radiance is an easy doer, and this red sport of Radiance will be welcomed especially by the private gardeners who grow Radiance extensively.

Sunburst. Long, pointed buds that open perfectly into a sunburst of deep, golden yellow is the best description we can make of this wonderful rose. From the standpoint of quality, it is the best yellow rose ever grown. It is at its best on its own roots and we offer own-root plants only.

CARNATIONS

New Varieties.

Maine Sunshine. A clear yellow seedling Carnation. It originated at Cottage Gardens from a cross of Mrs. C. W. Ward and Crystal White. Maine Sunshine has been grown for the past three seasons, and has proved itself a valuable variety aside from its color. The blooms resemble Matchless in size, substance and form. A. C. S. judges have given a score of 90 points at two annual conventions. The Forner gold medal for the best new variety and the Kerr special prize for keeping after a long shipment were awarded Maine Sunshine at Chicago in January, 1920. Disseminated Dec. 1, 1920, by Strout's Inc., Biddeford, Me.

Harvester. A new white of great promise sent out last season by the introducers as a free-flowering sort that will be found excellent for general growing. Not as large a flower as Thomas C. Joy with us, but very early-flowering and very free.

Hope Henshaw. A new dark pink sent out by Pierson. The growers of Carnations have, in general, been pleased with both flower and plant. It is not a heavy grower, making little surplus wood, but it comes into flower early and makes good production records. It is cerise-pink in color, being much deeper than Mrs. C. W. Ward.

Thomas C. Joy. (Joy Floral Company.) This new white Carnation has received the enthusiastic endorsement of many of the largest Carnation growers throughout the country. The Joy Floral Company wisely placed blocks of plants with these growers in advance of the general offering of young plants and cuttings. With Pierson, it is doing well. It is free-flowering and makes a fine plant. The flower is of good size and is carried on a good strong stem. The fringed petals are attractive and the fragrance very pronounced. We predict a big future for the variety.

White Delight. The white sport of the older favorite, Pink Delight. It is a free-growing sort that comes into flower early. Flower is of medium size, beautifully formed and carried on long, strong stems.

Laddie. Color, a warm rose salmon pink. Flowers of largest size, average three and one-half inches in diameter when at proper stage to cut and which develop to four and one-half inches on the plants or in water. Undoubtedly, the coming fancy Carnation to grow. The keeping qualities are beyond question far ahead of any Carnation yet produced, being superior to Pink Delight from which as a seedling it inherited this excellent quality. The growth is good and clean, makes large plants which quickly throw strong stiff flowering shoots. The calyx is all that can be desired. An early and prolific producer.

General List of Carnations.

Enchantress Supreme. Light salmon-pink in color; has the characteristics of the Enchantress family in habit of growth and productiveness. It is better than Enchantress, from which it is a sport, in color, calyx, and form of flower. It is so much of an improvement

that we have discarded Enchantress and offer our trade Enchantress Supreme as the best of the flesh-pink varieties.

Benora. The best variegated carnation. In color it is creamy white, penciled with bright red. It is a free grower and a good producer, in addition to being an excellent keeper.

White Wonder. Large, pure white blooms on long, wiry stems are characteristic of this variety. It is a producer and one of the finest white carnations. It is a fitting companion to Matchless.

Mrs. C. W. Ward. In the dark pink section, Mrs. C. W. Ward is the only variety generally grown, and the plant characteristics, combined with keeping quality and high class bloom, recommend it to all carnation growers.

Aviator. A very intense scarlet. Flowers are well formed with a full center. One of the best producing Carnations.

White Enchantress. This old favorite has stood the test of time and is today one of the three finest white carnations. It is a clean grower, produces good flowers constantly throughout the season.

Matchless. This variety is regarded by many as the best white carnation. It is a good, average producer and the flowers are of the best quality. It is a wonderful keeper and we unhesitatingly recommend Matchless.

Novelties.

The Marinelli Carnations. Perpetual Giant Flowering, of French Origin. The latest and most amazing introduction of Carnations and an entirely new departure and novelty.

Merveille Francaise. (The largest Carnation in the world). Color, flesh, with pink stripes and spots.

Le Miracle. The most remarkable color ever obtained, being purple lavender in Winter or shady position, changing to a variegation of colors in Spring and Summer. Rooted cuttings \$2.00 each, \$20.00 per Doz., \$100.00 per 100.
